Compact, rugged video processor with open architecture

Customisable computer delivers real-time video processing and MIL-qualified performance in a compact, rugged design

The DPM-3 rugged computer from Esterline is used for on-the-move operations in the space constrained crewstations of combat and tactical vehicles and helicopters. It delivers the latest MXM graphics and Intel® Mobile Core™ computing power, and is fully MIL qualified and field proven.

Compact, Modular Solution for Extreme Environments

The DPM-3 computer is designed for optimal SWaP-C (size, weight, power, and cost), offering the most compact package in its processing class. Its modular and open architecture facilitates a complete, customised solution, all ruggedised for the most extreme environments.

Real-Time Video Processing

The DPM-3 computer easily connects to a wide range of sensors, and its discrete GPU enables hardware accelerated image processing. Also featured are advanced video processing (such as image fusion) and high-resolution video streaming functionality for improved situational awareness.
