

INVISIO Control™ app

Tailor to the mission and change on the go

The INVISIO Control™ app provides military and public safety professionals access to manage their INVISIO Intercom system on the go or pre-mission.

Via an intuitive interface users can get an overview of the communication at all times, control and adjust access rights and change audio settings.

The solution is available as a Windows app or as an API that can be integrated into an existing system.

Tailored to the mission
Adjusted on the go
Simple and intuitive
Standalone or integrated

Key features

- Visualize all incoming and outgoing radio traffic
- Dynamically change all settings – radios, users, volume etc.
- Relay/crossband radios connected to the intercom system
- Integrate with other systems, such as navigation or battle management systems

The main visual of all incoming (red) and outgoing radio traffic (green)

The main menu for configuration and setup

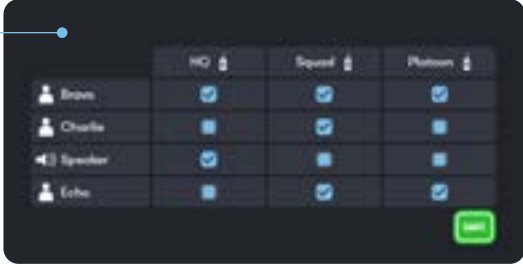

The app is available as:

- A Windows application that runs on any Windows 10/11 Tablet/PC
- An API that can be integrated into an existing system

Edit comms
